

LINEAR ELECTRIC ACTUATORS EL (1,2 kN to 25 kN)

DESCRIPTION

The EL series linear electric actuators are designed for operation of control valves in modulating and on/off services in process engineering and industrial applications. The self-locking stem nut is driven by an electric motor via a gearing.

Load-dependent switches and/or mechanical limit switches define the stops for the end positions.

MAIN FEATURES

Modular retrofittable design.

24 V AC, 115 V AC, 230 V AC, 400 V AC 50/60 Hz and 24 V DC supply voltages.

Manual operation with disengagement of the actuator motor.

IP 65 (EL12 IP 43) protection.

Valve protection against excessive force due to load-dependent seating.

Mounting to valves made via yoke or mounting flange DIN 3358, enabling easy connection to all types of valves. Standard version is suitable for ADCATrol valves.

Defined closing force in the end positions leading to tight valve shutoff.

Stall proof synchronous motors (or brake motors for higher positioning forces) ensure highest positioning accuracy.

Mechanical stroke indication via anti-rotation bar.

Exact, backlash-free measurement of actual valve stroke by direct coupling to the valve stem.

Universally usable actuators due to control via 3-point-step controllers, analogue input signals (0 to 10 V, 0(4) to 20 mA), or fieldbus systems. Limit switches are easily adjustable for stroke limitation or as signal for intermediate positions.
